

Weekly Progress Report

Name: Devwrat Gupta

Domain: Python Programming

Date of submission: 19/06/2026

Week Ending: 02

I. Overview:

This week, the primary focus was on learning conditional statements in Python and understanding how decision-making works in programs. I also continued exploring the File Organizer project and practiced applying conditional logic in real-world examples.

II. Achievements:

1. USC_TIA Familiarization:

- Continued exploring the internship learning resources and study materials.
- Successfully completed the weekly assessment related to Python conditional statements.

2. Python Project Contributions:

Name of the project:- File Organizer

- Reviewed and tested the File Organizer project developed during Week 1.
- Understood how conditional statements can be used to identify and categorize files based on their extensions.
- Analyzed the project flow and improved understanding of its working logic.
- Improved the project by adding support for multiple file extensions and handling duplicate files.

3.Learning Python:

- Learned conditional statements including if, elif, and else.
- Practiced decision-making logic through examples and exercises.
- Practiced writing and debugging Python code during project development.
- Scored 18/20 in the weekly Python quiz.

III. Challenges:

1. Understanding Conditional Logic:

- Faced some difficulty in understanding how multiple conditions are evaluated in a program.
- Required additional practice to understand the flow of nested and chained conditions.

2. Applying Concepts in Projects:

- Understanding how conditional statements are used in practical applications took some experimentation and testing.
- Improved confidence by running and modifying code examples.
- Seeking guidance to overcome challenges and enhance understanding.

IV. Learning Resources:

1. USC_TIA Documentation:

- Referred to the learning materials and Python reference resources provided during the internship.
- Reviewed examples related to conditional statements and program flow.

2. Python Learning Resources:

- Practiced Python programs involving decision-making statements.
- Used coding examples and exercises to strengthen understanding of conditional logic.

V. Next Week's Goals:

1. Python Learning:

- Learn upcoming Python concepts and apply them in practical examples.
- Improve coding skills through regular practice.

2. Python Project Development:

- Continue reviewing and improving the File Organizer project.
- Explore ways to make the code more organized and efficient.
- Focus on writing cleaner and more efficient Python code.

VI. Additional Comments:

This week helped me understand the importance of conditional statements in programming. The quiz and practice exercises improved my understanding of decision-making logic and how it can be used in real-world Python projects.
